

MODULE 1 · PLATFORM FOUNDATION · SCREEN BOOK 1 OF 3

M01 Screens — Admin

All 15 Module 1 admin screens drawn inside the one admin console, each with a build card (what the screen is built from: requirements, components, tabs, endpoints, tables, permissions, tests, fields and open issues), and every tab of every screen. Also: who owns which part of the console, the menu, one full flow with the "how it works" sequence, the emergency path, a view-only example and the common states.

build cards · common states

5 · Review decisions

Issues from the Screen-Field Map

1 • The rule — one console, and who owns which part

Part of the console	Owner	What the owner decides
Shell: top bar, search, queue counts, environment label, your profile	M15	Same on every screen; built once
Side menu (Queues • People • Farmers & agents • Settings • Audit)	M15	Built from the register: menu group, menu label and permissions. A role sees only what it may use
Page header, decision bar; patterns P1–P7	M15	Where the title, tabs and buttons sit; the pattern gives the buttons
Settings group and Changes / approvals (M16-AD-01, menu label "Changes")	M16	Settings shell; the list of changes waiting for a second person
Staff sign-in page (M02-AD-10)	M02	Two-step sign-in, security keys, VPN rule, idle warning
Screen body of each module screen	Module	What the screen shows and allows (M01: M01-6 §12)
Approval rule for every settings screen	M01	One source: M01-6 §12.1

How a module adds a screen

- Pick a pattern: P1 Queue + case, P2 Settings editor, P3 List, P4 Look-up (P5–P7 later).
- Add one row to the register: code, name, **menu label**, menu group, pattern, route, permissions, approval level, **endpoints**, **components**.
- Specify the screen body in the module's UX-UI document; map its fields in the Screen–Field Map.
- The menu item appears in the right group, for the right roles. The shell does not change.

How to read a screen page

- Left: the screen in the console, with three notes.
- Right: the **build card** — pointers to where each fact lives. Nothing on the card is new; it is generated from the Cross-Module Registers and the Screen–Field Map.

Sources: Cross-Module Standards §4 and §11.2 • UX/UI Foundation §8.9 • Admin UX Design Brief §3–4 • M01-6 §12.

M01-AD-03 · Country table — edit a draft, Sign-in tab (Step 3 of 9)

OudhTrade Admin console · Sample mock-up · values are examples

► ① Top bar (M15): one search, queue counts for the queues you work on, environment label on non-production, your profile.

► ② Side menu (M15) with menu labels from the register; ③ Settings group (M16) holds every settings screen and "Changes".

► ④ Page header, tabs and ⑥ decision bar (M15) stay in place; ⑤ the screen body is Module 1's (M01-6 §12.4). History is a tab on every settings screen.

Overview 2 Where the M01 admin screens sit in the menu

- Built from the register columns Menu group and Menu label: Queues 9, People 6, Farmers & agents 4, Settings 20, Audit 4.
- Module 1: 10 settings screens, 4 Audit screens and 1 panel (M01-AD-13) that opens inside review screens.
- Five screens are not menu items ("—" in the register): they open as a tab, panel or case view, or before the console.

How should the Settings menu grow? — three options

Settings has 20 items from M01–M03 today and may pass 60 when all 20 modules are added. Decided: B, sub-headings by area (Cross-Module Standards §4.2).

A • One flat list

Every settings screen in one long list.

✓ Good

Room for search and descriptions; best for 60+ screens.

✗ Weak

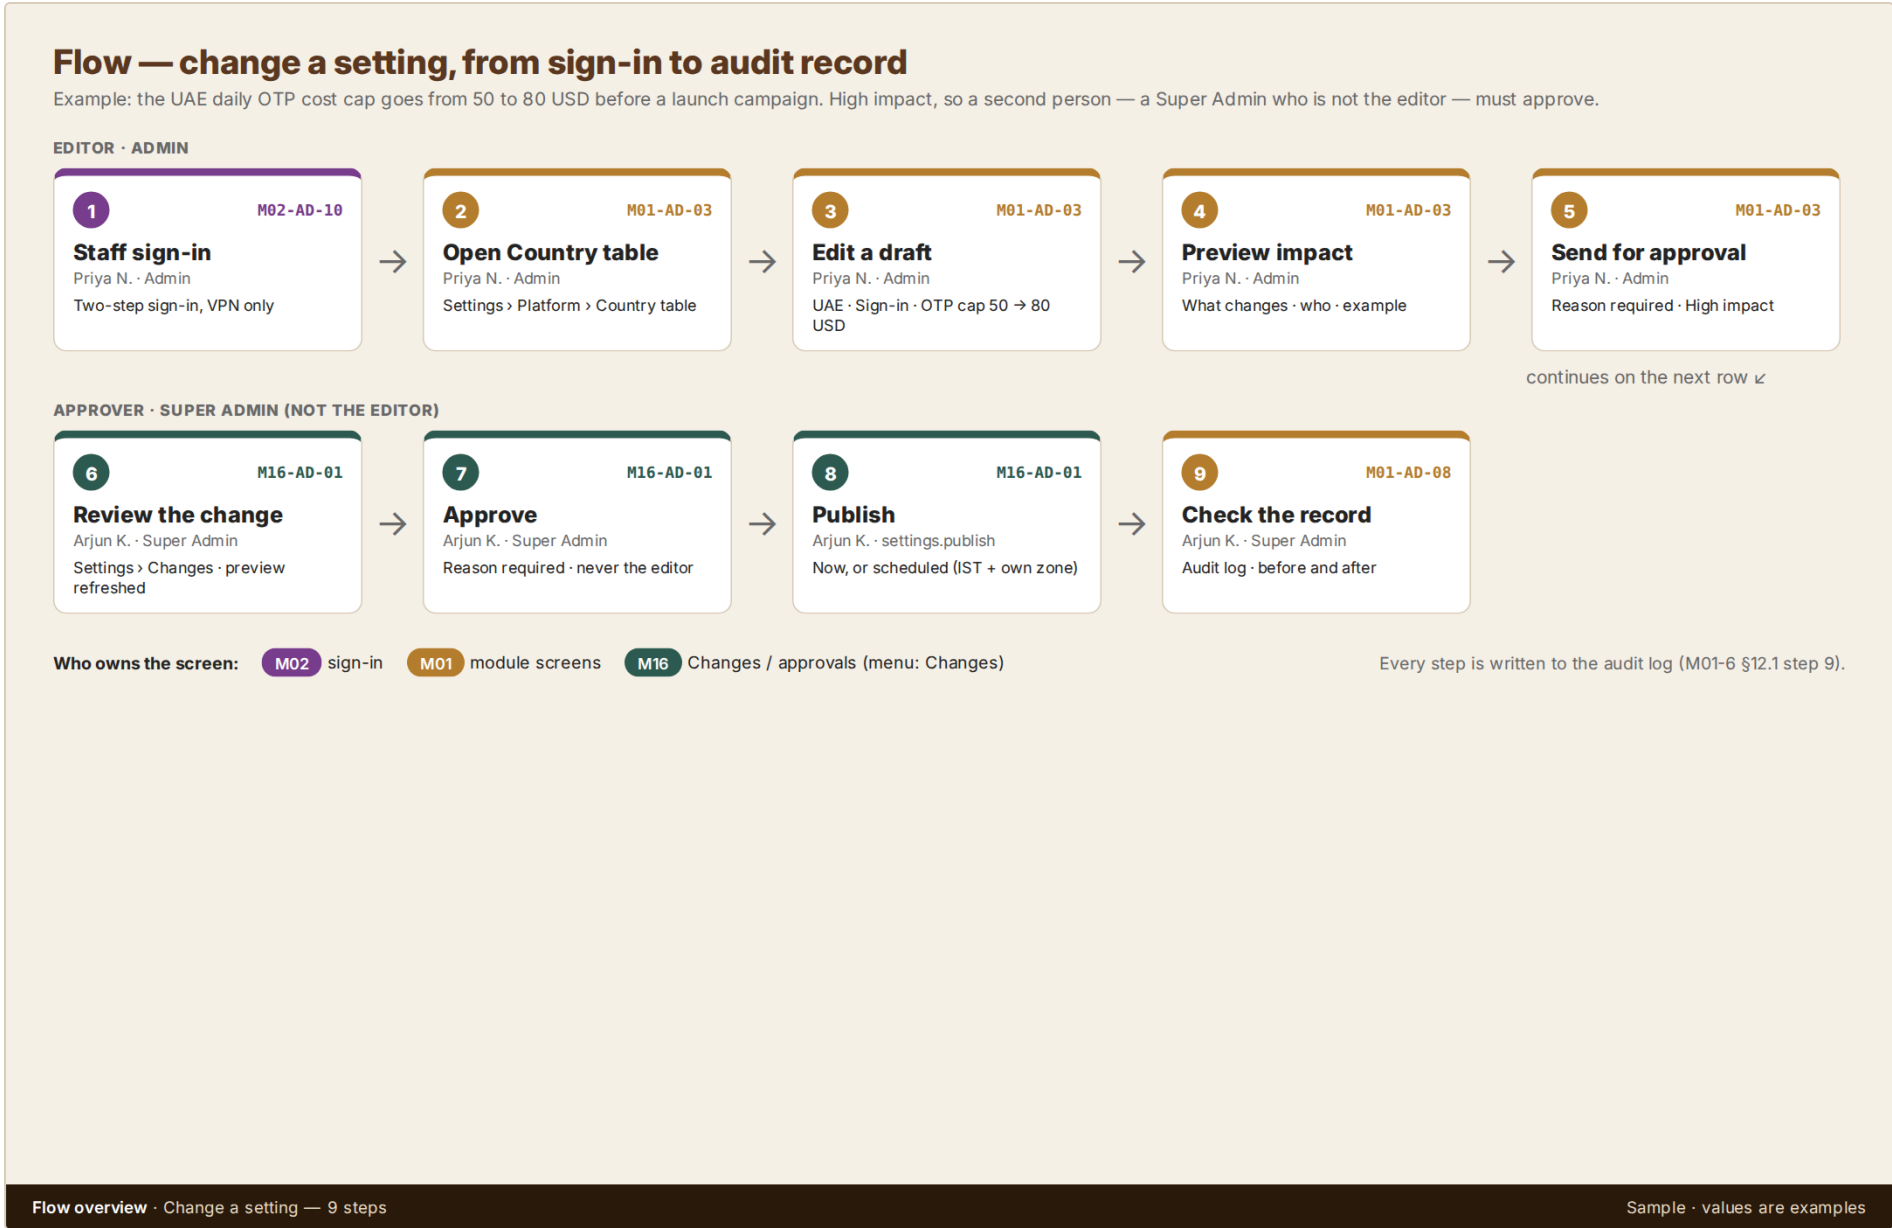

Two clicks to reach a screen; one more page to design.

Settings menu options · Decided — how Settings is organised inside the menu (B)

Sample · decision recorded

- Settings has 20 items today and may pass 60 with all 20 modules.
- Decided 29 Sep 2026: option B. Changes first, then one sub-heading per area; only the open area expands (Cross-Module Standards §4.2).
- A (flat list) and C (Settings home with cards) are kept on this page for the record; M16 may add a Settings home later.

Flow Change a setting — the whole flow on one page

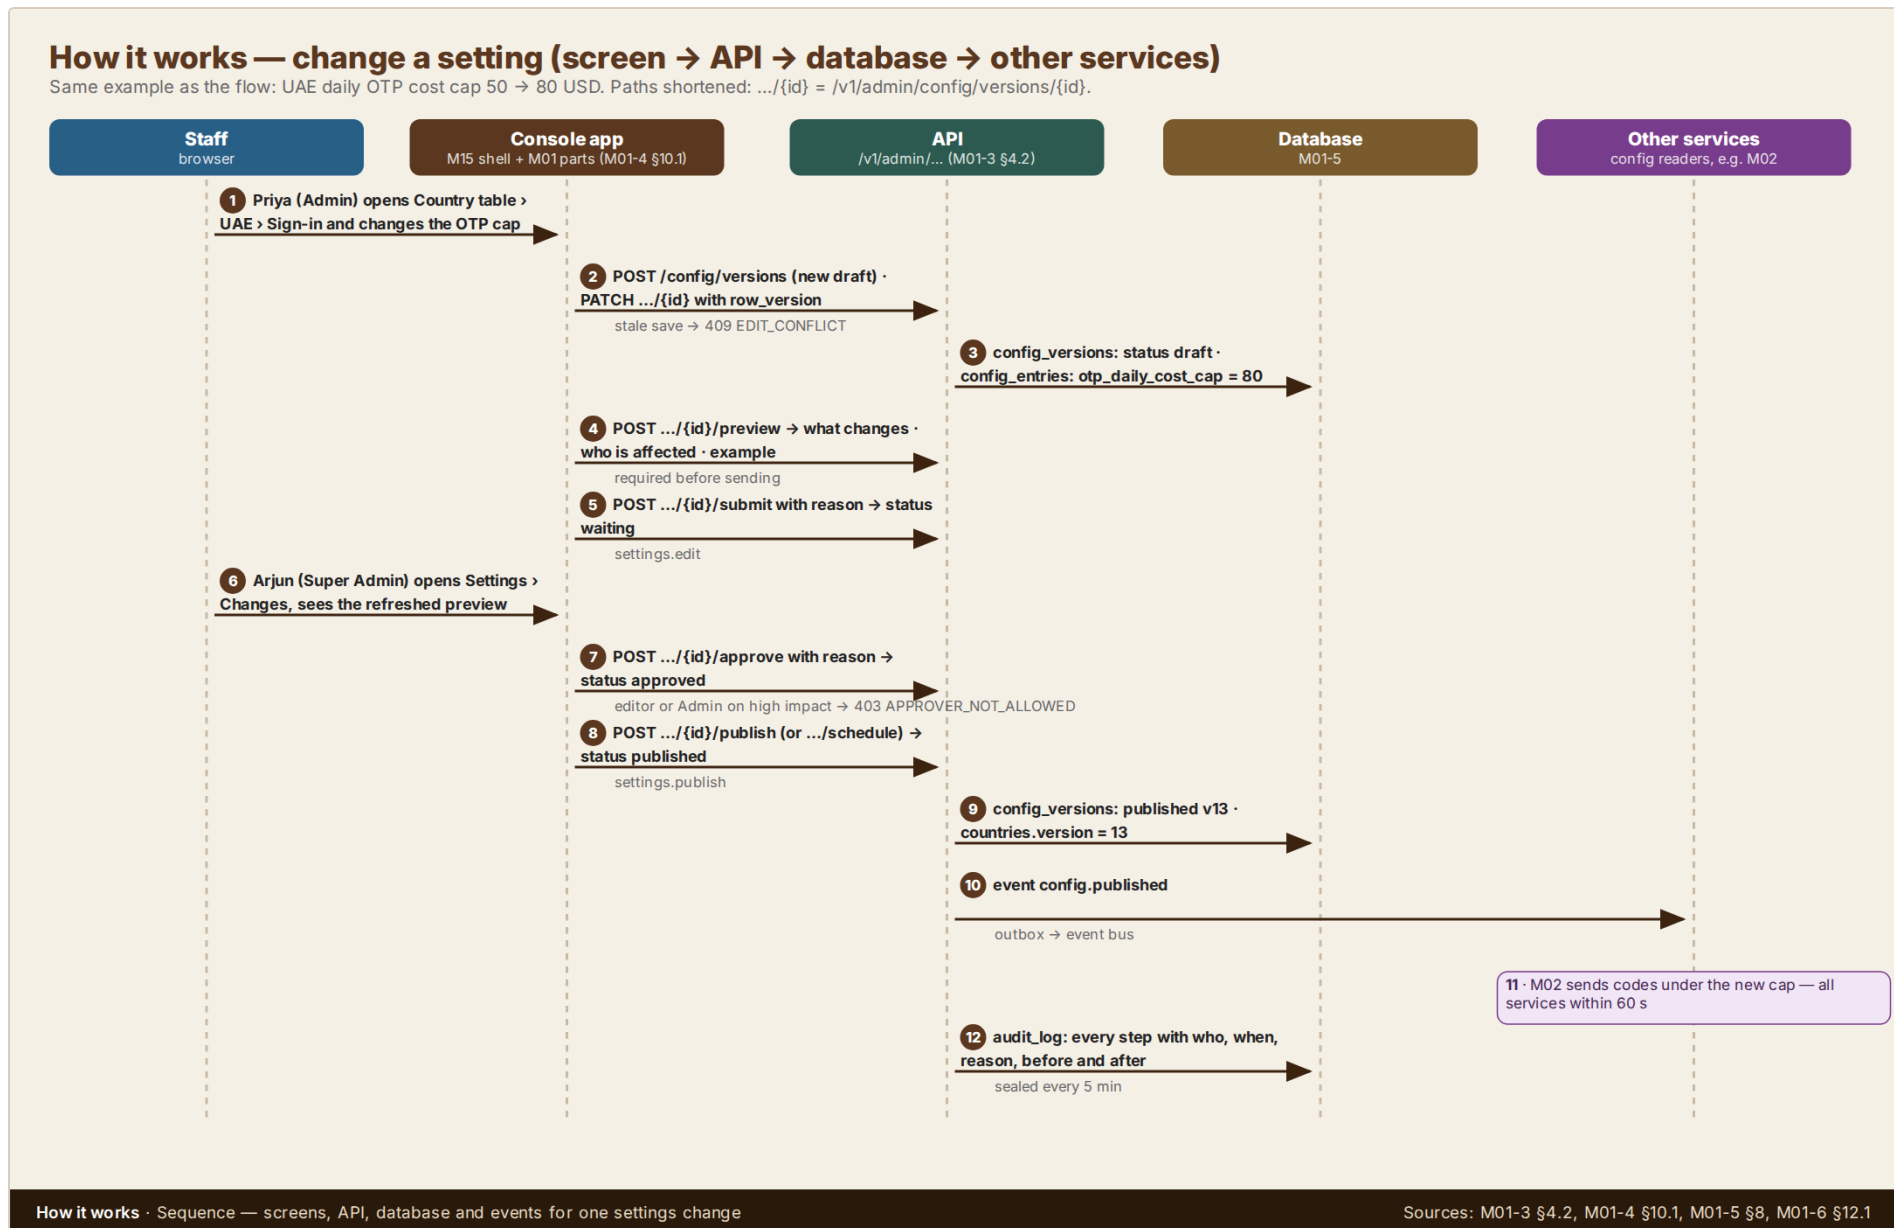

► Scenario: before a UAE launch campaign, an Admin raises the UAE daily OTP cost cap from 50 to 80 USD.

► High impact: a Super Admin who is not the editor approves; publishing needs settings.publish.

► Owners: M02 (sign-in), M01 (Country table, audit log), M16 (Changes / approvals).

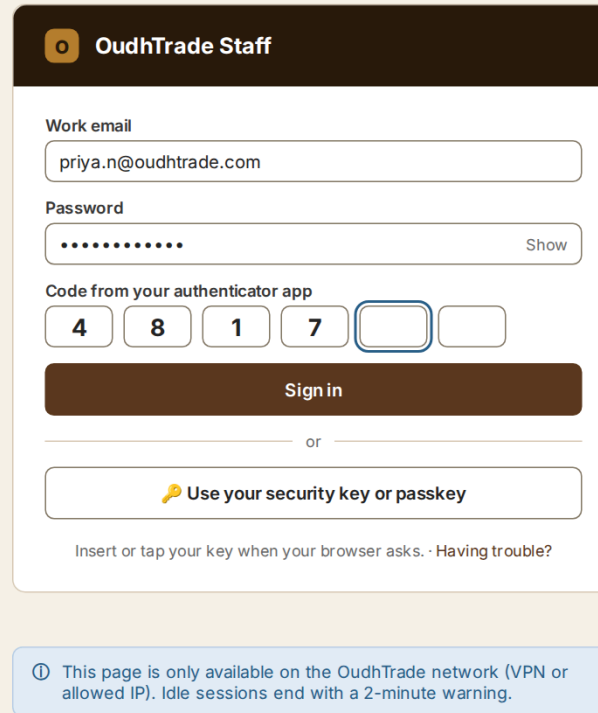

How it works Sequence — screen → API → database → other services

► Every settings screen uses the same settings-version API (M01-3 §4.2) and the shared parts of M01-4 §10.1.

► Nothing is live until publish; config.published tells other services, which use the new value within 60 seconds.

► Every step writes an audit record with who, when, reason, before and after (M01-6 §12.1 step 9).

The mock-up shows a sign-in form for OudhTrade Staff. It includes fields for Work email (priya.n@oudhtrade.com), Password (masked with dots), and a 6-digit code from an authenticator app (4, 8, 1, 7, followed by two empty boxes). A 'Sign in' button is present. Below the button is a link to 'Use your security key or passkey' with a key icon. A note at the bottom states: 'Insert or tap your key when your browser asks. · Having trouble?'. A blue information box at the bottom of the form area contains the text: 'This page is only available on the OudhTrade network (VPN or allowed IP). Idle sessions end with a 2-minute warning.'

► Work email, password, then the code from an authenticator app; Super Admin and Finance also register a security key.

► Only on the OudhTrade network (VPN or allowed IP). Idle sessions end after a 2-minute warning.

► Owned by M02 (M02-6 §14). The console opens only after sign-in.

What changes

Setting	Scope	Old	New	
Daily OTP cost cap	Country · AE	50 USD	80 USD	Changed

Who is affected

People signing up or signing in with a code in the UAE.
At today's average code cost, the cap allows **about 2,600 codes a day** (now about 1,600).
Yesterday 1,020 codes were sent in the UAE — the cap was not reached.

Example

On a campaign day with 2,000 code requests in the UAE, all codes are sent. Before this change, sending would stop for the day after about 1,600.

Figures come from the last 7 days. Where there is no data yet the preview says "shown when data is available".

11 / 53

M01-AD-03 Step 5 · Send for approval

The screenshot displays the OudhTrade Admin console interface. The top navigation bar includes the OudhTrade logo, an 'Admin' link, a search bar, and several status indicators: 'Verification 12', 'Farm visits 5', and 'Changes 3'. The user profile 'Priya N. Admin · IST' is visible in the top right. The left sidebar contains a menu with categories like QUEUES, PEOPLE, FARMERS & AGENTS, SETTINGS, and AUDIT. The 'Country table' is selected under SETTINGS. The main content area shows the 'United Arab Emirates (AE)' settings, with a 'Draft' status and a 'High impact' warning. A modal titled 'Send for approval' is open, requiring a reason for the change. The modal text states: 'UAE launch campaign starts 1 Oct. We expect about twice as many sign-ups for two weeks.' It also includes a note: 'A Super Admin who is not you must approve it. You will see it in Changes / approvals > My drafts.' The modal has 'Cancel' and 'Send for approval' buttons. The background shows the 'Preview impact' section with details about the 'Daily OTP cost cap' change from 50 to 80 USD.

Send for approval ⚠ High impact

United Arab Emirates · Sign-in · Daily OTP cost cap 50 → 80 USD

Why are you making this change? (required)

UAE launch campaign starts 1 Oct. We expect about twice as many sign-ups for two weeks.

ⓘ A Super Admin who is not you must approve it. You will see it in Changes / approvals > My drafts.

Cancel Send for approval

- A reason is required: "Why are you making this change?"
- High impact → a Super Admin who is not the editor approves; other changes → any other Admin.
- The editor follows it in Settings > Changes > My drafts.

What happens next

1 · The change is live at once and written to the audit log with the reason. 2 · All Super Admins get an alert. 3 · A second Super Admin reviews it within 24 hours: confirm, or open a follow-up draft (POST /v1/admin/config/emergency/{versionId}/review). 4 · Turning the switch back on is a normal change: draft → preview → approval → publish.

The second Super Admin reviews it on **Settings > Changes** (M16-AD-01): **Confirm** with a reason, or **Open follow-up draft**.

Press ? for keyboard shortcuts

M01-AD-02 · Emergency path 2 — after the switch-off, until the second review

OudhTrade Admin console · Emergency path · Sample mock-up

- The item shows "Emergency change — review due by {time}" until a second Super Admin reviews it (within 24 hours).
- Turning the feature back ON uses the normal steps: draft → preview → approval → publish.
- The second Super Admin reviews it on Changes (M16-AD-01): Confirm (reason) or Open follow-up draft (M01-6 §12.1).

M01-AD-02 Maintenance 1 — start now

The screenshot shows the OudhTrade Admin console. The top navigation bar includes the OudhTrade logo, 'Admin' role, a search bar, and notification badges for Verification (12), Farm visits (5), and Changes (3). The user is Arjun K., Super Admin, IST. The left sidebar lists various settings categories: QUEUES (9), PEOPLE (6), FARMERS & AGENTS (4), SETTINGS (20), Changes (3), Platform, Settings editor, Feature switches (selected), Country table, Reserved names, Holiday calendar, Rate limits, AI usage & budgets, Retention policies, Units & factors, Simple lists, Sign-in & security (1), Profiles & verification (8), and AUDIT (4). The main content area is titled 'Feature switches' and shows a list of switches. A modal titled 'Start maintenance now' is open, showing options for 'Full' or 'Read-only' mode, an 'Expected back' date, and a 'Why now?' field. A warning message states: 'All Super Admins get an alert. A second Super Admin must review this within 24 hours. You can end maintenance yourself at any time.' The modal has 'Cancel' and 'Start maintenance now' buttons.

Start maintenance now
Production · starts at once, without waiting for approval · Super Admin only

Mode

- ☒ **Full** — every user sees the maintenance page; background work pauses; only Super Admins can use the console.
- ☐ **Read-only** — people can look around and sign in, but nothing can be changed.

Expected back (optional — shown to users in their time zone)
5 Oct 2026, 04:00 IST

Why now? (required)
Database storage failing over after the AWS alert at 01:40; writes must stop until the copy is checked.

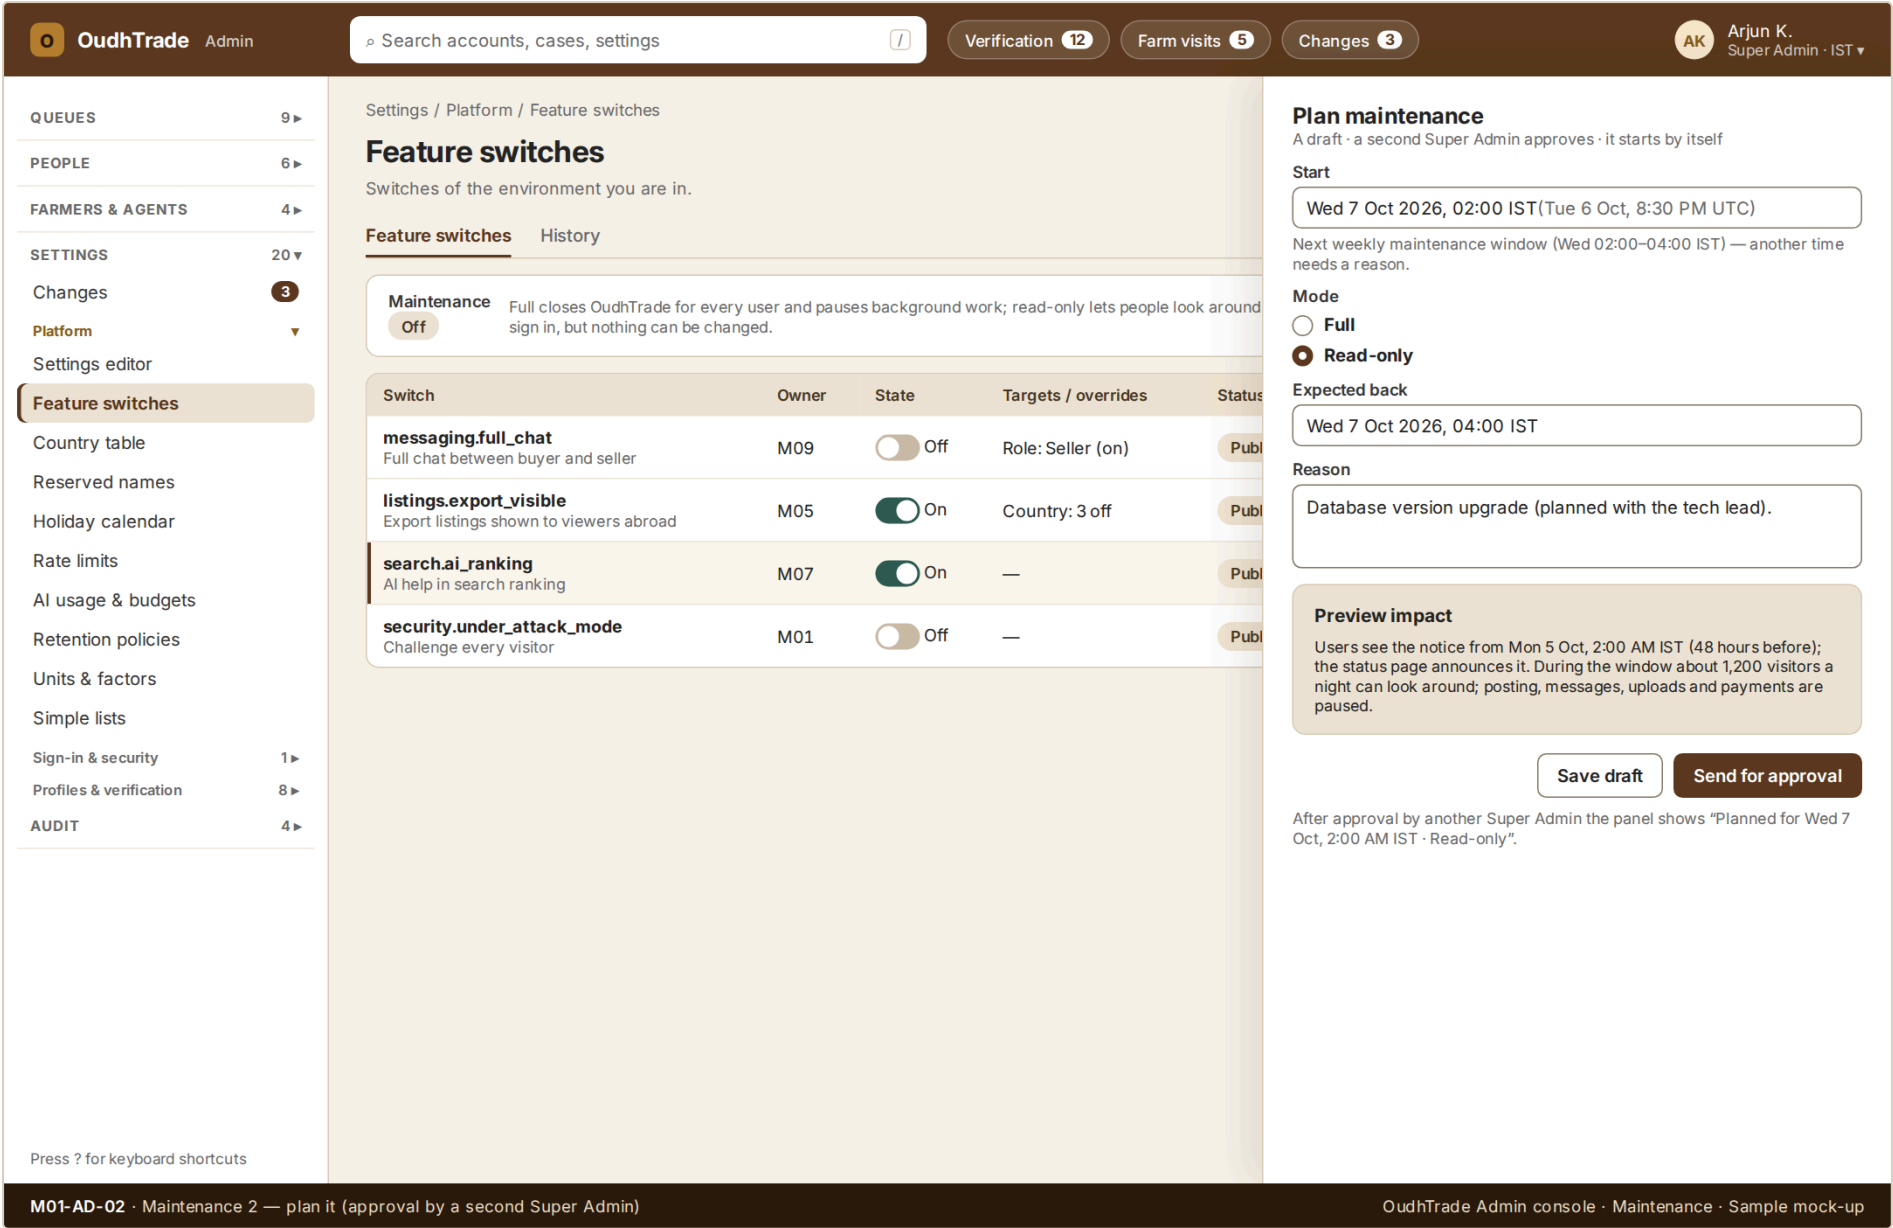

⚠ All Super Admins get an alert. A second Super Admin must review this within 24 hours. You can end maintenance yourself at any time.

Cancel Start maintenance now

► Only a Super Admin can start maintenance: Full (maintenance page for everyone; background work pauses) or Read-only (look around and sign in; no changes).

► Expected back (optional) and "Why now?" (required). Live at once, all Super Admins alerted; a second Super Admin reviews it within 24 hours on Changes.

► Spec: M01-6 §12.3, M01-2 CFG-012 and API-009; API POST /v1/admin/maintenance/start.

- A normal draft: start time (the weekly window Wed 02:00–04:00 IST is suggested), mode, expected back and reason; Preview impact; a second Super Admin approves; it starts by itself.
- Users see the notice from maintenance.notice_hours before the start (48 hours by default; the status page announces it too) — see the user desktop book, M01-S07.
- The panel then shows "Planned for {date time} · {mode}".

M01-AD-02 Maintenance 3 — while it is on, and ending it

The screenshot shows the OudhTrade Admin console interface. The top navigation bar includes the OudhTrade logo, an 'Admin' link, a search bar, and several status indicators: 'Verification 12', 'Farm visits 5', and 'Changes 3'. The user profile 'Leena S. Super Admin · IST' is on the right. The left sidebar lists various sections: QUEUES (9), PEOPLE (6), FARMERS & AGENTS (4), SETTINGS (20), Changes (3), Platform, Settings editor, Feature switches (selected), Country table, Reserved names, Holiday calendar, Rate limits, AI usage & budgets, Retention policies, Units & factors, Simple lists, Sign-in & security (1), Profiles & verification (8), and AUDIT (4). The main content area is titled 'Settings / Platform / Feature switches' and 'Feature switches'. It shows a 'Maintenance' status of 'Full maintenance — on' and a 'Turn on under-attack mode' button. A modal titled 'End maintenance' is open, displaying a note: 'OudhTrade opens again at once for everyone. No second approval is needed.' and a text box with 'Storage copy checked; writes are safe again.' The modal has 'Cancel' and 'End maintenance' buttons. Below the modal, a table lists feature switches:

Switch				
messaging.full_chat Full chat between buyer and seller				
listings.export_visible Export listings shown to viewers abroad	M05	On	Country: 3 off	Published
search.ai_ranking AI help in search ranking	M07	On	—	Published
security.under_attack_mode Challenge every visitor	M01	Off	—	Published

At the bottom of the console, there is a footer with 'M01-AD-02 · Maintenance 3 — while it is on, and ending it' on the left and 'OudhTrade Admin console · Maintenance · Sample mock-up' on the right.

► While maintenance is on only Super Admins can use the console; other staff see the maintenance page.

► End maintenance: any one Super Admin, a short note required; OudhTrade opens at once, with no second approval.

► Background work paused in full maintenance runs by itself after the end; nothing is lost (M01-2 API-009).

Country table

Exchange rates

History

One row per country. Changes go through draft → preview → approval.

Currency	Rate	Base	Rate date	Source · fetched	State
AED	0.04405	INR	29 Sep 2026	Provider [TBC] · 06:00 IST	Up to date
SAR	0.04498	INR	29 Sep 2026	Provider [TBC] · 06:00 IST	Up to date
SGD	0.01547	INR	29 Sep 2026	Provider [TBC] · 06:00 IST	Up to date
JPY	1.73912	INR	28 Sep 2026	Provider [TBC] · 06:00 IST	Old — last rates in use
EUR	0.01078	INR	27 Sep 2026	Provider [TBC] · 06:00 IST	Guide price hidden

About these rates

Fetches daily at 06:00 IST for the guide currencies. If a fetch fails, the last rates stay in use; after 24 hours the alert is sent ("Old — last rates in use"); after 48 hours (fx.hide_after_hours) the guide price is hidden on listings.

View only. Guide prices are never used for sorting, billing or quotations (M01-2 CTY-006).

Press ? for keyboard shortcuts

M01-AD-03 · Country table — Exchange rates tab (view only)

OudhTrade Admin console · Sample mock-up · values are examples

► Each guide currency: rate against the base currency, rate date, source and state — Up to date · Old — last rates in use · Guide price hidden.

► View only; rates are fetched daily at 06:00 IST. Old after 24 hours without new rates (alert sent); hidden after fx.hide_after_hours (48 hours).

► Rates and provider are samples ([TBC] provider). Spec: M01-6 §12.4; M01-2 CTY-005.

AI usage and budgets

Month: September 2026 ▼

AI usage & budgetsHistory

Sample amounts. The monthly total is still to be confirmed (tech lead estimate). Split: moderation 40 %, translation 30 %, search 20 %, other 10 %.

Module · purpose	Type	Calls	Tokens in / out	Cost this month	Budget used	Alert
M12 · Moderation hints	Essential	48,210	31.2 M / 4.1 M	96 of 120 USD	80 %	80 % reached
M17 · Translation	Non-essential	12,904	9.8 M / 9.1 M	90 of 90 USD	100 %	Paused since 26 Sep
M07 · Search embeddings	Non-essential	220,118	14.0 M / —	31 of 60 USD	52 %	None
M03 · Document reading	Essential	3,402	2.2 M / 0.4 M	12 of 30 USD	40 %	None
Platform total		284,634		229 of 300 USD	76 %	

Translation is paused: It reached 100 % of its budget. The feature works without AI until the budget is raised or the month ends.

Essential purposes are never paused; they alert at 100 %. Finance can draft budget changes; a Super Admin approves.

Selected: M17 · Translation

Edit budget...

M01-AD-07 · AI usage and budgets

OudhTrade Admin console · Sample mock-up · values are examples

- ▶ One row per module and purpose: calls, tokens, cost against the monthly budget, alert state, pause state.
- ▶ Non-essential purposes pause at 100 %; essential ones only alert. Finance can draft budget changes.
- ▶ Amounts are samples — the total waits for the tech lead estimate. Spec: \$12.8.

Units

Helper units

State land units

History

Name	Code	Type	Standard unit	Factor	State-based	Helper only	Live listings	State
Gram	g	Weight	g	1	No	No	8,210	Active
Tola (wood, chips, powder)	tola_w	Weight	g	11.66	No	Yes	3,420	Active
Mithqal	mithqal	Weight	g	4.25	No	Yes	610	Active
Tola (oil)	tola_oil	Volume	ml	12	No	Yes	1,905	Active
Quarter tola (oil)	qtola_oil	Volume	ml	3	No	Yes	388	Active
Bigha	bigha	Area	m²	Per state	Yes	No	96	Active

Preview impact · draft

Changing tola (wood) from 11.66 g to 11.664 g changes the helper line on about 3,420 listings; stored metric prices do not change.

Oil volume and weight are never converted into each other. A unit used by live listings can't be retired.

Draft · 1 changed factor

Version	Status	Made by	Approved by	Published (IST)	Reason
v15	Waiting for approval	Arjun K.	—	—	Reserve "support-team"
v14	Published	Priya N.	Arjun K.	22 Sep, 10:05	Retire "helpdesk"
v13	Rejected	Arjun K.	Priya N.	—	Ban "agarwood-king"
v12	Rolled back	Priya N.	Arjun K.	12 Sep, 16:30	Roll back to version 10
v11	Published	Arjun K.	Priya N.	5 Sep, 11:20	Protect "oudhtrade"
v10	Published	Priya N.	Arjun K.	1 Sep, 09:00	Starting list

Select a version to compare it with the one before; Roll back is offered on earlier published versions. Same tab on every settings screen (M01-6 §12.1 step 7). Statuses: draft, waiting for approval, approved, scheduled, published, rejected, cancelled, rolled back.

Compare · version 14 with version 13 (live before)

Version 14

Name	Version 13	Version 14
helpdesk	Reserved	Reserved Retired
support	Reserved	Reserved
oudhtrade	Protected brand	Protected brand

Made by

Priya N. · 21 Sep

Sent by

Priya N. · 21 Sep, 16:40

Approved by

Arjun K. · 22 Sep, 09:50

Published by

Arjun K. · 22 Sep, 10:05

Reason

Retire "helpdesk" — now used by a partner

ⓘ

Roll back to an earlier version makes a new draft that needs approval like any other change.

Close

M01-AD-04 · History tab — the same on every settings screen

OudhTrade Admin console · Sample mock-up · values are examples

► Every settings screen has History as its last tab; its main tab carries the menu label (Cross-Module Standards §4.2).

► Each version: number, status, who made it, who approved it, when it was published and the reason; Compare shows old and new side by side.

► Roll back on an earlier version makes a new draft that needs approval like any other change (M01-6 §12.1 steps 7–8).

Staff idle warning (M02-6 §14).

States · Common states for admin screens

Sample · exact texts from the specs

► Loading, empty, not allowed, validation error, server error, publish failed, edit conflict, not approved, own change, session ending.

► Exact texts from M01-6 §12.1 (and §12.5, §12.7, M02-6 §14). The designer makes each state once as a component.

► Dialogs (reason boxes) and toasts ("Published...") appear inside the flow pages.

5 · Review decisions — admin screens

Found while mapping every field to its API field and column; decided by the product owner on 29 Sep 2026 and applied to the documents. Full text: **Screen–Field Map, sheet "Open issues"**.

ID	Screen	Kind	Problem	Decision
OI-20	M01-AD-01	No column	The emergency path requires “Why is this an emergency?”, but config_versions has no column for it (only is_emergency, reviewed_by, reviewed_at); submit_reason is for send...	Emergency reason kept in config_versions.submit_reason (no new column).
OI-21	M01-AD-01	No screen	No screen element lets the second Super Admin record the 24-hour review: M01-6 §12.1 only says the review must happen, while M01-3 has POST /v1/admin/config/emergency/{ve...	Review on the Changes screen (M16-AD-01): Confirm or Open follow-up draft.
OI-22	M01-AD-01	No screen	The History tab lists only who made the version, who approved it, when it was published and the reason; the columns submitted_by / submitted_at, rejected_by / rejected_at...	History tab shows sent, rejected, cancelled and published by / when.
OI-23	M01-AD-01	No column	The settings editor shows both a “name” and a “one-line description”, but the settings register (M01-2 §18) has only Key and What it controls; there is no name field.	Settings register gets a Name column (206 names); the editor shows name + description.
OI-24	M01-AD-01	Other	backups.pitr_days has screen “— (infrastructure code)” in M01-2 §18, but TC-192 expects every value it reads, backups included, to match §18 “and can be changed on its se...	backups.pitr_days is set in infrastructure code; TC-192 only reads it.
OI-25	M01-AD-01	No test	Setting rows with no test: files.video.max_mb, files.decode.memory_mb, files.decode.timeout_heic_s, files.decode.timeout_other_s, agent_app.offline_queue_days (7-day wipe...	Test M01-TC-216 covers the nine settings.
OI-26	M01-AD-02	No column	The switch list shows a description and an owner module, but feature_flags has only name, is_enabled and rules.	feature_flags gets description and owner_module.
OI-27	M01-AD-02	No column	M01-3 §4.2 has POST /v1/admin/switches (create) and POST .../{name}/retire, but feature_flags has no active / status column to record a retired switch, and M01-6 §12.3 has ...	New switches come with code releases (create endpoint removed); Retire on the screen; feature_flags.active added.
OI-28	M01-AD-03	No column	Selling allowed, launch status and export listings visible are “kept with the country’s features (M01-5 Section 5.1)”, but M01-5 §5.1 only shows {“opportunities”: false};...	M01-5 §5.1 lists the features keys and values.
OI-29	M01-AD-03	No screen	Several country fields have no detail tab to edit them: status (high impact) and the “other” fields names, market region, currency, guide currency and default language ar...	Status goes in the “Status and features” tab; names, market region, currency, guide currency and default language in General.
OI-30	M01-AD-03	No screen	M01-2 §18 assigns countries.guide_currencies (currencies offered as guide currency) to M01-AD-03, and TC-120 removes SGD “in Admin”, but M01-6 §12.4 has no field for it a...	Guide currencies offered moves to the Settings editor (M01-AD-01).
OI-31	M01-AD-03	Other	The settings register has no row for the “other” country fields (names, market region, phone code, time zones, weekend days, number style, address layout, currency, defau...	Register rows added (level Other): countries. <code>.general and country_regions / country_districts.
OI-33	M01-AD-03	Other	The States and districts tab has no fields, states, messages or errors in M01-6 §12.4 (only “(CTY-002)”), although M01-3 has create, edit and retire endpoints for regions...	States and districts tab specified in M01-6 §12.4 (errors: “A state with this code already exists.”, “This state has {n} active districts. Retire them first.”).

5 · Review decisions — admin screens (continued)

Found while mapping every field to its API field and column; decided by the product owner on 29 Sep 2026 and applied to the documents. Full text: **Screen–Field Map, sheet "Open issues"**.

ID	Screen	Kind	Problem	Decision
OI-34	M01-AD-03	No test	Country table inputs with no test: status and selling-allowed filters, time zones, weekend days, sign-in methods ("At least one sign-in method is required."), SMS sender ...	Test M01-TC-217.
OI-35	M01-AD-04	No column	Retiring a reserved name needs a reason, but reserved_names has no retire-reason column (only reason for adding and active).	Retire reason kept on the config version and in the audit log (no new column).
OI-36	M01-AD-04	Limit mismatch	The message "This name is already on the list as {kind}." suggests a name can be on the list only once, but the constraint is UNIQUE (name, kind), which allows the same n...	A name is on the list once: UNIQUE (name).
OI-37	M01-AD-04	No test	Reserved names: search, the kind filter and Retire are not tested (TC-143, TC-175, TC-202 cover adding and matching).	Test M01-TC-218.
OI-38	M01-AD-05	Label mismatch	Staff type a holiday name (Add holiday; CSV column "name"), but business_holidays stores only name_key, a translation key (e.g. holiday.diwali); no holiday endpoint says ...	The server makes the key from the English name and stores the text in translations.
OI-39	M01-AD-05	No test	Holiday calendar: country and year switchers, the kind field and Retire have no test (TC-141 adds a holiday; TC-176 imports a year).	Test M01-TC-219.
OI-40	M01-AD-06	Limit mismatch	M01-3 §10 uses the keys "Staff user" and "Crawler (verified by reverse DNS)", but rate_limit_policies.key_type allows only ip, device, account, plan, api_key.	key_type adds staff_user and crawler.
OI-41	M01-AD-06	Limit mismatch	on_breach holds one value (wait, challenge, block_15m, security_event), but M01-3 §10 uses "Ignore extra" (cookie consent write), "Slow down (429)" (crawlers) and escalat...	on_breach is an ordered list (wait, challenge, slow_down, ignore, block, security_event); block length from rate_limit.block_minutes.
OI-42	M01-AD-06	No column	The side panel counts blocks in the last 24 hours for the selected policy, but rate_limit_blocks (key, until, reason, set_by) has no module / action_group column, so bloc...	rate_limit_blocks gets module and action_group.
OI-43	M01-AD-06	No screen	M01-2 §18 assigns rate_limit.block_minutes (15, 5–1,440, High) to M01-AD-06, but M01-6 §12.7 has no field for it and M01-3 §4.2 has no endpoint for it.	Block length field at the top of the Rate limits screen.
OI-44	M01-AD-06	Other	The empty state says "No policies match these filters.", but §12.7 names no filters or search.	Filters (module, key type, action on breach) and search added to M01-6 §12.7.
OI-45	M01-AD-06	No test	Rate limits: editing the time window and the action on breach is not tested (TC-177 changes only the limit).	Test M01-TC-220.
OI-46	M01-AD-07	No screen	The setting ai_budgets.<module>.<purpose> covers the monthly limit, "its alert levels and whether it is essential", but Edit budget allows only monthly amount and alert l...	Essential (never paused) switch added to Edit budget (high impact).

5 · Review decisions — admin screens (continued)

Found while mapping every field to its API field and column; decided by the product owner on 29 Sep 2026 and applied to the documents. Full text: **Screen–Field Map, sheet "Open issues"**.

ID	Screen	Kind	Problem	Decision
OI-47	M01-AD-07	Other	The month picker shows past months “against the monthly budget” with alert and pause state, but ai_budgets holds only the current monthly_limit, spent_this_month and paus...	A past month uses the budget of the version live then (no new table).
OI-48	M01-AD-07	No test	AI usage: the month picker and the alert-levels field are not tested (TC-149, TC-178, TC-184 cover amounts, alerts at 80 / 100 % and pause).	Test M01-TC-221.
OI-49	M01-AD-08	No column	The record detail shows a per-record chain result (“Chain intact — checked {date time}”, “Chain break found ...”), but audit_log (append-only) holds only hash / prev_hash a...	New table audit_verify_runs (M01-5 §9.4).
OI-50	M01-AD-09	No test	Legal hold: the filters (scope type, placed by, date) and search by ID or reference are not tested.	Test M01-TC-222.
OI-51	M01-AD-09	Other	The route /admin/legal-holds/{id} (detail) has no matching read endpoint: M01-3 lists GET /v1/admin/legal-holds, POST, POST .../{id}/release and GET .../coverage, but no GET ...	GET /v1/admin/legal-holds/{id} added.
OI-52	M01-AD-10	Label mismatch	The API filter status=retrying is not a jobs.status value (queued, running, done, dead, discarded); “Retrying” has to be derived (e.g. queued with attempts > 0).	Retrying = queued with attempts above 0 (derived; no new status).
OI-53	M01-AD-10	No column	The owner-module column and filter and the first-failure-time column have no column in jobs (id, kind, payload, run_at, status, attempts, last_error).	jobs gets module and first_failed_at.
OI-54	M01-AD-10	No column	Retry all of this kind and Discard need a reason, but jobs has no column for it (discard only sets status discarded).	Retry-all and discard reasons kept in the audit log (no new column).
OI-55	M01-AD-10	Privacy	The screen promises the last error has “no personal data”, and shows the target from the payload, but M01-5 §9.3 and M01-3 §5 set no rule that jobs.last_error or payload ...	last_error = code + request ID with personal data removed; IDs only from the payload; “View account” link to account lookup (M02-AD-01).
OI-56	M01-AD-10	No test	Failed jobs: the filters (job kind, module, date) are not tested (TC-187 covers retry and discard).	Test M01-TC-223.
OI-57	M01-AD-11	No column	“Last daily run result (items deleted or anonymised)” has no column; retention_policies has none and schedules keeps only last_run_at / last_status for the whole job.	New table retention_run_results (M01-5 §10.4).
OI-58	M01-AD-11	No column	The chip “To be confirmed with counsel” has no source column; “[TBC: final with counsel]” is only a note on period_days in M01-5.	retention_policies.to_be_confirmed added.
OI-59	M01-AD-11	Other	The hold count per data type cannot be worked out as specified: legal_holds.scope_type (account, profile, listing, thread, trade, file, legal_order) does not map to reten...	Scope-to-data-type rule added to M01-5 §10.2.

5 · Review decisions — admin screens (continued)

Found while mapping every field to its API field and column; decided by the product owner on 29 Sep 2026 and applied to the documents. Full text: **Screen–Field Map, sheet "Open issues"**.

ID	Screen	Kind	Problem	Decision
OI-60	M01-AD-11	No test	Retention policies: editing the action (delete / anonymise) and the legal basis is not tested (TC-188 changes periods only).	Test M01-TC-224.
OI-61	M01-AD-12	No column	The Units tab shows “Helper only (yes / no)”, but units has no such column (code, type, base_unit, factor_to_base, is_state_based, label_key, active, version).	units.is_helper_only added.
OI-62	M01-AD-12	No column	Helper units are “set per category and per viewer country” (UNT-008; setting units.helper_units), but countries.helper_units is per country only and the Helper units tab ...	Per viewer country only; “per category” removed from UNT-008.
OI-63	M01-AD-12	Other	The Helper units tab has no endpoint: M01-3 §4.2 unit endpoints cover units and land units only, and countries.helper_units belongs to the Country table (whose PATCH is h...	GET / PATCH /v1/admin/units/helper added (“other” level).
OI-64	M01-AD-12	Other	“Add unit” has no fields, rules or errors in M01-6 §12.13, and no test (tests cover factor change, retire and state factors).	Add unit form specified in M01-6 §12.13; test M01-TC-226.
OI-65	M01-AD-14	No column	Retiring a simple-list item needs a reason, but tags has no column for it (status only).	Retire reason kept on the config version and in the audit log (no new column).
OI-66	M01-AD-14	No screen	tag_groups.status (active, retired) is shown and edited on no screen; groups cannot be added or removed on the Simple lists screen.	Groups are added or retired only with the module that uses them (migration).
OI-67	M01-AD-14	No test	Simple lists: the active / retired / all filter, search by name or key, and Rename group are not tested.	Test M01-TC-225.

What this book is — and what comes next

This book is

- Module 1's admin screens drawn in the one console shell, with a build card per screen.
- Styled with the UX/UI Foundation tokens (oud brown, warm sand, Inter), compact rows, light mode, 1440 px frames.
- Filled with example data; people's names are invented.
- Generated from the Cross-Module Registers (menu labels, routes, endpoints, components, permissions, tests) and the Screen-Field Map — rebuilt when they change.

This book is not

- The final design — the designer finalises the shell and patterns in Figma.
- A source of wording or rules — those stay in M01-6 §12, M02-6 §14 and Cross-Module Standards §4.

Open points

- **Settings menu:** decided — B, sub-headings by area (Overview 3).
- **Field Map issues:** all 47 on admin screens decided on 29 Sep 2026 (section 5); 0 open.
- **Console home page** after sign-in: for Module 15 to specify.
- **Values to confirm:** global OTP cost cap and AI budgets (tech lead), retention periods (counsel).

The M01 screen files

- M01 Screens — Admin (this book) · M01 Screens — User (desktop) · M01 Screens — User (phone).
- OudhTrade-M01-Screen-Field-Map.xlsx — one row per field, with the issues and their decisions.
- png folder — every picture, named by screen code, for Figma or slides.
